

Project Development Phase

Performance Test

Date	12 February 2026
Team ID	LTVIP2026TMIDS74725
Project Name	Heart Disease Analysis
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Heart disease dataset successfully loaded and visualized in charts and graphs. Data displays patient details such as age, cholesterol, blood pressure, and heart disease prediction results.
2.	Data Preprocessing	Missing values handled, duplicate records removed, and data normalized for accurate analysis. Categorical values converted into numerical form for visualization and prediction. 
3.	Utilization of Filters	Filters applied for age group, gender, chest pain type, cholesterol level, and heart disease risk. Users can interactively explore data based on selected conditions. 

		
4.	Calculation fields Used	Calculated fields created for risk percentage, average cholesterol, heart disease probability, and patient category grouping (low, medium, high risk).
5.	Dashboard design	<p>No of Visualizations / Graphs – 10</p>  <p style="text-align: right;">Next</p>

6 | Story Design

No of Visualizations / Graphs – 2
